Julietta

for Juliet Balconies

Julietta creates a balcony where there is none!

Modern and contemporary glass Juliet balcony offering safety and protection and sense of openness in upper floor spaces.

Today architects design large openings for doors and windows, giving thus the feeling of more open and virtual larger spaces in buildings and crowded cities.

In buildings where there are no balconies, Julietta is the ideal solution, as it can be installed between window frames as well as on the exterior side of walls.

Not having a real balcony does not stop having a spectacular view and connection with the outside environment anymore!
